

Morning Paper Report - Friday, August 21, 2026

Recent, non-repeated papers matched to visual working memory, visual search, modeling, working-memory representation, neural-network memory models, AI for human memory, and egocentric predictive-coding memory themes.

1. Transformations in visual working memory impose fidelity costs

Eva Lout, Jarrod Lewis-Peacock

Journal of Vision, 2025

Source: Crossref; matched terms: visual working memory, working memory, fidelity

Link: <https://doi.org/10.1167/jov.25.9.2541>

Goal: The title and metadata suggest relevance to Lila's working-memory and attention topics, but no abstract was available from the source API.

Method: Method details were not available in the retrieved metadata.

Results: Result details were not available in the retrieved metadata.

Conclusion: Open the linked record to inspect the full abstract or paper before journal-club use.

2. EEG decoding reveals a link between visual working memory fidelity and the magnitude of similarity-induced memory bias

Nursima Ünver, Rosanne Rademaker, Keisuke Fukuda

Journal of Vision, 2025

Source: Crossref; matched terms: visual working memory, working memory, fidelity

Link: <https://doi.org/10.1167/jov.25.9.2706>

Goal: The title and metadata suggest relevance to Lila's working-memory and attention topics, but no abstract was available from the source API.

Method: Method details were not available in the retrieved metadata.

Results: Result details were not available in the retrieved metadata.

Conclusion: Open the linked record to inspect the full abstract or paper before journal-club use.

3. Geometry of naturalistic object representations in recurrent neural network models of working memory

Xiaoxuan Lei, Takuya Ito, Pouya Bashivan

Advances in Neural Information Processing Systems 37, 2024

Source: Crossref; matched terms: working memory, neural network, recurrent neural network

Link: <https://doi.org/10.52202/079017-3191>

Goal: The title and metadata suggest relevance to Lila's working-memory and attention topics, but no abstract was available from the source API.

Method: Method details were not available in the retrieved metadata.

Results: Result details were not available in the retrieved metadata.

Conclusion: Open the linked record to inspect the full abstract or paper before journal-club use.

4. Parietal-driven visual working memory representation in occipito-temporal cortex.

Xu Y

Current biology : CB, 2023

Source: PubMed; matched terms: visual working memory, working memory representation, working memory

Link: <https://pubmed.ncbi.nlm.nih.gov/37741281/>

Goal: The title and metadata suggest relevance to Lila's working-memory and attention topics, but no abstract was available from the source API.

Method: Method details were not available in the retrieved metadata.

Results: Result details were not available in the retrieved metadata.

Conclusion: Open the linked record to inspect the full abstract or paper before journal-club use.

5. Mapping visual working memory models to a theoretical framework

William Xiang Quan Ngiam

2023

Source: Crossref; matched terms: visual working memory, working memory, precision

Link: <https://doi.org/10.31234/osf.io/g8erx>

Goal: The body of research on visual working memory (VWM) – the system often described as a limited memory store of visual information in service of ongoing tasks – is growing rapidly

Method: The discovery of numerous related phenomena, and the many subtly different definitions of working memory, signify a challenge to maintain a coherent theoretical framework to discuss concepts, compare models and design studies

Results: I illustrate how opposing viewpoints can be brought into accord, situating leading models of VWM to better identify their differences and improve their comparison. The hope is that the theory map will help VWM researchers get on the same page – clarifying hidden intuitions and aligning varying definitions – and become a useful device for meaningful discussions, development of models, and definitive empirical...

Conclusion: I illustrate how opposing viewpoints can be brought into accord, situating leading models of VWM to better identify their differences and improve their comparison. The hope is that the theory map will help VWM researchers get on the same page – clarifying hidden intuitions and aligning varying definitions – and become a useful device for meaningful discussions, development of models, and definitive empirical...
