

Morning Paper Report - Tuesday, June 02, 2026

Recent, non-repeated papers matched to visual working memory, visual search, modeling, SEM/intelligence/creativity, and egocentric predictive-coding memory themes.

1. Executive and motivational pathways to ADHD traits in the general population: a structural equation model of working memory, attention, delay discounting, and decision-making

Masanaga Ikegami, M. Sorama, A. Katayama, Hidetoshi Omiya
BMC Psychology, 2026

Source: Semantic Scholar; matched terms: working memory, modeling, structural equation

Link: <https://www.semanticscholar.org/paper/a001b59c7e208299bc946d61e1a421a24c28f757>

Goal: Background Research has associated attention-deficit/hyperactivity disorder (ADHD) with difficulties in executive functions, such as working memory, sustained attention, and inhibitory control, as well as with motivational alterations, including steep delay discounting

Method: Delay discounting was measured using the five-trial adjusting delay task, and ADHD traits were assessed with the Adult ADHD Self-Report Scale

Results: Results ADHD trait scores were negatively correlated with the CGT indices of decision-making quality and risk adjustment

Conclusion: SEM indicated sequential indirect pathways linking steeper delay discounting to higher ADHD traits through reduced sustained attention, increased working-memory errors, and poorer CGT performance

2. Modeling Working Memory Capacity in Sentence Processing with Lossy-Context Surprisal

Authors unavailable
2026

Source: OSF/PsyArXiv; matched terms: working memory, computational model, modeling, modeling working memory

Link: https://osf.io/preprints/psyarxiv/u5tf2_v1/

Goal: Understanding how comprehenders interpret linguistic input in real time has long been a focus of sentence processing research

Method: The recently-proposed Resource-Rational Lossy-context Surprisal (RR-LCS) model can be applied for making predictions at the level of individual readers: it predicts that individuals with low working memory capacity (WMC) have a lossy representation of the previous context and may therefore experience high surprisal at a long-distance dependency, while individuals with high WMC will experience a lower surprisal...

Results: The results revealed that low-WMC participants initially showed a strong locality effect between the short and long conditions, which decreased over time due to adaptation

Conclusion: The recently-proposed Resource-Rational Lossy-context Surprisal (RR-LCS) model can be applied for making predictions at the level of individual readers: it predicts that individuals with low working memory capacity (WMC) have a lossy representation of the previous context and may therefore experience high surprisal at a long-distance dependency, while individuals with high WMC will experience a lower surprisal...

3. Saccades temporarily disrupt attentional filtering for visual working memory

Authors unavailable

2026

Source: OSF/PsyArXiv; matched terms: visual working memory, working memory

Link: https://osf.io/preprints/psyarxiv/ec4ku_v1/

Goal: Visual working memory (VWM) is highly capacity limited, and attention acts as a filter to ensure that goal-relevant information is encoded

Method: Do eye movements similarly disrupt control over the attentional filter regulating access to VWM? Across three experiments, we tested whether the VWM filter persists across saccades or is temporarily disrupted

Results: Not only have eye movements been shown to disrupt perceptual processes, but the VWM filter itself has been shown to be susceptible to distraction-induced disruptions

Conclusion: Together, the results indicate that saccades interrupt the filter that governs VWM encoding and that attentional control must be re-established post-saccade

4. Structural Equation Modelling Analysis of Improving Teachers' Teaching Creativity: The Role of Professional Identity and Emotional Intelligence

M. F. J. Syah, Naufal Ishartono, A. Susilo, N. Inayati, Sharul Effendy Janudin, Mahaliza Mansor, et al.

Jurnal Pendidikan Progresif, 2024

Source: Semantic Scholar; matched terms: intelligence, creativity, structural equation

Link: <https://www.semanticscholar.org/paper/285d04864e9a007cc50d0b20b8261dfe7eb3fae1>

Goal: : Structural Equation Modelling Analysis of Improving Teachers' Teaching Creativity: The Role of Professional Identity and Emotional Intelligence

Method: : Structural Equation Modelling Analysis of Improving Teachers' Teaching Creativity: The Role of Professional Identity and Emotional Intelligence

Results: Findings: The findings revealed that the model confirmed a strong relationship among the three variables

Conclusion: These results suggest that professional identity functions as a full mediator in the relationship between emotional intelligence and teaching creativity

5. The Role of Attachment Styles and Spiritual Intelligence in Predicting Women's Emotional Divorce

, Zahra Shirzadi, Reza Khakpour, , Anahita Khodabakhshi-Koolaei,

Journal of Client-Centered Nursing Care, 2121

Source: Crossref; matched terms: intelligence

Link: <https://doi.org/10.32598/jccnc.7.1.350.1>

Goal: Background: Emotional divorce refers to a situation in which the emotional relationship, support, passion, warmth, attention, love, and intimacy between couples (husband & wife) decline or diminish

Method: In total, 400 women who met the inclusion criteria were selected as the study participants using voluntary response and convenience sampling techniques

Results: Results: The obtained results suggested a significant positive relationship between the anxious-avoidant attachment style and emotional divorce ($P < 0.01$)

Conclusion: Background: Emotional divorce refers to a situation in which the emotional relationship, support, passion, warmth, attention, love, and intimacy between couples (husband & wife) decline or diminish
