

Morning Paper Report - Tuesday, September 01, 2026

Recent, non-repeated papers matched to visual working memory, visual search, modeling, working-memory representation, neural-network memory models, AI for human memory, and egocentric predictive-coding memory themes.

1. Sensory Neural Noise as a Limiting Factor in Visual Working Memory Precision in Neurotypicals and Schizophrenia.

Park WJ, Ichinose M, Hu G, Woodman GF, Tadin D, Park S
bioRxiv : the preprint server for biology, 2025

Source: PubMed; matched terms: visual working memory, working memory, precision

Link: <https://pubmed.ncbi.nlm.nih.gov/41279316/>

Goal: The title and metadata suggest relevance to Lila's working-memory and attention topics, but no abstract was available from the source API.

Method: Method details were not available in the retrieved metadata.

Results: Result details were not available in the retrieved metadata.

Conclusion: Open the linked record to inspect the full abstract or paper before journal-club use.

2. Multiplexing working memory and time in the trajectories of neural networks

Shanglin Zhou, Michael Seay, Jiannis Taxis, Peyman Golshani, Dean V. Buonomano
Nature Human Behaviour, 2023

Source: Crossref; matched terms: working memory, neural network, neural networks

Link: <https://doi.org/10.1038/s41562-023-01592-y>

Goal: The title and metadata suggest relevance to Lila's working-memory and attention topics, but no abstract was available from the source API.

Method: Method details were not available in the retrieved metadata.

Results: Result details were not available in the retrieved metadata.

Conclusion: Open the linked record to inspect the full abstract or paper before journal-club use.

3. Data-driven oscillatory network modeling with condition-dependent coupling laws: Identifying directed neural interactions in working memory–attention dynamics

Mika Ohkawa, Ying Joey Zhou, Saskia Haegens, Martin Jafarian
2026

Source: Crossref; matched terms: working memory, modeling

Link: <https://doi.org/10.64898/2026.07.06.736523>

Goal: Abstract Learning new information in the presence of distracters and changing conditions requires the ability to adapt

Method: Here, we introduce a phenomenological data-driven framework for oscillatory network modeling that learns condition-dependent coupling laws directly from neural recordings and enables inference of condition-dependent directed pathways

Results: Despite inter-subject variability, working memory recall data from all four participants examined under distraction showed the emergence of a pathway from the dorsolateral prefrontal cortex (dlPFC) to the primary visual cortex (V1)

Conclusion: This finding is consistent with the established role of the dlPFC in cognitive control and suggests that distracter processing recruits a directed interaction from prefrontal to visual regions

4. The Power of Memory: How Lifelong Learning AI Models Are Reshaping Human-AI Collaboration

Deekshitha Kosaraju

International Journal of Science and Healthcare Research, 2024

Source: Crossref; matched terms: neural network, neural networks, artificial intelligence, ai model

Link: <https://doi.org/10.52403/ijshr.20240359>

Goal: The way intelligence (AI) models are able to keep learning and adjusting without losing past knowledge

Method: The way intelligence (AI) models are able to keep learning and adjusting without losing past knowledge

Results: We look into the advancements in AIs ability to retain information over time the obstacles faced when constructing these adaptable frameworks and the significant impact they have on reshaping interactions, between humans and AI systems Keywords: Lifelong Learning, AI Memory, Continuous Learning, Human-AI Collaboration, Autonomous Systems, Neural Networks, Catastrophic Forgetting, Persistent Memory, AI Adaptation,...

Conclusion: We look into the advancements in AIs ability to retain information over time the obstacles faced when constructing these adaptable frameworks and the significant impact they have on reshaping interactions, between humans and AI systems Keywords: Lifelong Learning, AI Memory, Continuous Learning, Human-AI Collaboration, Autonomous Systems, Neural Networks, Catastrophic Forgetting, Persistent Memory, AI Adaptation,...

5. Multiplexing working memory and time in the trajectories of neural networks.

Zhou S, Seay M, Taxis J, Golshani P, Buonomano DV

Nature human behaviour, 2023

Source: PubMed; matched terms: working memory, neural network, neural networks

Link: <https://pubmed.ncbi.nlm.nih.gov/37081099/>

Goal: The title and metadata suggest relevance to Lila's working-memory and attention topics, but no abstract was available from the source API.

Method: Method details were not available in the retrieved metadata.

Results: Result details were not available in the retrieved metadata.

Conclusion: Open the linked record to inspect the full abstract or paper before journal-club use.
